Admission Criteria For Community Recovery Residences

- 1) Rate of clinical improvement in a hospital setting (or current setting) is slow, but perceptible over months or longer, or potentially perceptible in a different environment. And –
- 2) Levels of care less intense than a community recovery residence would be, or are insufficient. And –
- 3) The patient:
 - a) evidences an interest in moving, or
 - b) potentially evidences an interest, or
 - c) is unable/unwilling to consider a move despite the appropriate, immediate need for the resource they are utilizing by another person.And-
- 4) The system of care is willing to re-admit the patient to a higher level without EE criteria being met, or by stipulated EE, if the community recovery residence is unable to provide adequate or safe care.
